Motorized Z-Axis

The motorized movement of the Z-axis simplifies and speeds up the adjustment of the grinding wheel's height, enhancing the usability and efficiency.

Digital Parameter Display

Displays Speed Regulation and Z-Axis Positioning. Can store previous Z-Axis parameters.

Water System Plate

Water System Plate enhances performance by gliding over a thin water film, ensuring smooth operation and preventing surface scratches on processed materials.

Speed Regulation

The speed controllers for the Z-axis and rotation speed are crucial components for maximizing flexibility and efficiency in processing various materials.

Quick-Connect Tool

The grinding wheel can be changed in just a few seconds, minimizing interruptions during tool changes.
